

PHP TASK

Create a new Laravel Project (Latest version)

create 2 migrations

- ✓ students
- ✓ name
- ✓ email
- ✓ phone
- ✓ address
- ✓ city
- ✓ state
- ✓ Country
- ✓ status

-> Subjects (One to many relationship with user table)

- ✓ name
- ✓ marks scored (how many marks scored by student)
- ✓ grade

Create a CRUD (Create, Retrieve, Update, Delete) function of the student's table from which someone can add Student detail with multiple subjects (English, Maths, History).

On the student show page, you need to show all student details along with Student subject data.

You need to insert all student detail from a single form and also a single form to update student detail.

apart from this, there should be an option to enable or disable students from the student list page. you need to use the AJAX request to enable or disable the student.

Time period to complete this task: 3 hours

Note: all code should be pushed to the github public repo and name of the git repo should be:

CURRENT DATE - your Name (ie: jun12johndeo)
